	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S
ARM Simulator																																										
Initial Database Setup																																										
Initialize global array for all the registers (R0-R15).																																										
Initialize global memory array.																																										
Initialize array to store all ARM commands.																																										
Initialize array to store all opcode's																																										
Implementing Stage Specific Functions																																										
Make a Fetch function																																										
Make a Decode function																																										
Make a Execute function																																										
Make a Memory access function																																										
Make a Writeback function																																										
Testing																																										
Milestone																																										
Input File Handling																																										
Read input file line by line and split about space																																										
Fill the global memory array with instructions at index																																										
Testing / Bonus implementation																																										
Testing / Bonus
